A SPECIAL LECTURE ON GLOBAL WARMING AND IT'S EFFECT ON ENVIRONMENT	
Date:04-11-2025	Time:1.00 PM to 4.00PM
Venue : Bahumukhi auditorium KAPMC,SHIVAMOGGA	
Resource Person: Mr. Srikantha A.V Assistant professor, Channamallikarjuna Government First Grade College, Channagiri.	
Introduction: Global warming is the gradual increase in the Earth's average temperature due to the buildup of greenhouse gases such as carbon dioxide and methane in the atmosphere. Human activities like burning fossil fuels, deforestation, and industrial pollution are the main causes of global warming. Effects of Global Warming: Global warming has many harmful effects on the environment and human life. It causes rising temperatures, melting glaciers, sea-level rise, irregular rainfall, droughts, floods, heatwaves, and loss of biodiversity. It also affects agriculture, water resources, and human health. Prevention and Control: Global warming can be reduced by planting more trees, using renewable energy sources such as solar and wind power, reducing the use of fossil fuels, saving electricity, recycling waste, and spreading awareness about environmental protection. Conclusion: Global warming is a serious global issue that requires immediate action. Governments, industries, and individuals must work together to protect the environment and ensure a safe and healthy future for coming generations.
